

WHAT BUSINESSES NEED TO KNOW ABOUT EMAIL SECURITY

MSP LOGO

WHAT IS THE RISK TO MY BUSINESS?

Email is the easiest entry point for hackers to gain access to your organization. From distributing ransomware to carrying out phishing scams, email is utilized by cybercriminals as the delivery vector.

Now more than ever, these attacks are highly-sophisticated and targeted, often resulting in significant damage to businesses - operationally, financially, and reputationally. [91% of cyber-attacks begin with email.](#)

WHY ARE SMALL BUSINESSES TARGETED MOST BY ATTACKERS

Due to their enormous cybersecurity budgets, it is becoming more expensive and time-consuming for cybercriminals to successfully penetrate large corporations and multinationals. This has seen them shift their focus to softer targets - small and medium businesses that typically have fewer resources dedicated to preventing cybercrime.

HOW CAN I PROTECT MY BUSINESS?

YOUR MSP partners with Mesh to provide enterprise-grade security to businesses, protecting them against the full spectrum of email-based attacks.

- ✓ Easy and intuitive end-user experience.
- ✓ Improves productivity by eliminating time-consuming spam.
- ✓ Helps with compliance requirements.
- ✓ Detects and blocks all known email attacks before they reach the mailbox.
